PROFILE

Richard Kempster is a Forensic Consultant with Envista. He is responsible for investigating extent of damage and contamination in IT systems, data centres, equipment and machinery following damage caused by fires, floods and other disasters. As well as extent of damage he can also look at remediation, reinstatement and restoration options. This includes working alongside restoration companies and manufacturers to ensure that any restoration option also includes recertification and reinstatement of existing warranties wherever possible.

Prior to this role he was employed in a Research capacity assisting with cost validation and quantum, expert acquisition, and document analysis and review. In this role he assisted other Envista Forensic Engineers on a variety of projects covering Cause and Origin, extent of damage and delay analysis.
