

PROFILE

Alistair Ewing has over eight years of experience in Digital Forensic Analysis, Data Recovery, Mobile Phone Forensics, Litigation Support, and has served as an Expert Witness in criminal and civil cases in the UK. Mr Ewing began performing digital forensics in 2011 and had hundreds of hours of experience in this area. Qualified as an expert witness for some years and vetted by Sweet and Maxwell I have presented evidence in tribunals, civil and criminal courts in the UK. Mr Ewing performs around ten instructions a year supplementary to his corporate investigations, litigation support and collections.

Alistair received his initial training mobile phone analysis in 2011 with Swedish firm Mobile MSAB gaining the much sought after XRY qualification. Since that time Alistair has received numerous instructions on 100s of iOS, Android and traditional handsets typically used by suspects such as Nokia and Blackberries.

A portion Mr Ewing's work, in the past four years, has been in eDiscovery sphere. Using Intella, Nuix, Summation and more recently Relativity I can collect, troubleshoot, process and review using the software above suites. More advanced competencies on these tools, drawing from my forensic background, has enabled me to utilise visualisation to find 'hot' communication artefacts faster as well as a statistical display of results in more straightforward terms to non-technical clients.

Al has provided CDP Career Development Points and other training often since 2011 for lawyers, professionals, IT security departments, and local governments.

Experienced as a consultant, knowledgeable as an expert witness and skilled in a corporate environment in all aspects of collection, investigation and reporting.
