

# Digital Forensics Solutions

## for Claims & Litigation Professionals

We live in a digital world, where data is stored and accessed on a constantly increasing number of devices. Whether it be cell phones, wearable devices and “smart” appliances, or laptop computers, sophisticated operating systems, and cloud networks, the challenges organizations face to protect their assets and minimize liability in the digital-age are continually evolving. Because of the inherent risks associated with the rapid evolution of technology, today’s companies, from Fortune 500 to small privately owned businesses, must be aware of their unique data risks and have plans in place to address issues when they arise.

With our global capacity and breadth of expertise, as well as over 30 years of experience working with insurance claims and litigation professionals, Envista is uniquely positioned as the leader in Digital Forensics investigations.

## COMPUTER FORENSICS

---

Our certified experts have performed forensic examinations on computer systems in thousands of matters. Using forensically sound methodology and leading technology, we ensure no digital evidence goes uncovered. No matter the claim, we can assist you in every step of the investigative or litigation process, from collection and preservation to reporting and expert testimony.

## CYBER-INCIDENT AND DATA BREACH ANALYSIS

---

After a cyber-incident occurs, many questions need to be answered. Our experts can assist by performing a forensic examination to determine if an attack did in fact occur. If one did occur, we can determine what methods the attacker used and what security vulnerabilities were exploited. We help to determine the extent and severity of a breach, what sensitive data records may have been exposed, and what physical damage may have occurred due to cyber vandalism.

## CELL PHONE/GPS FORENSICS

---

Cell phones are used for everything from making calls and sending texts, to transferring money and storing confidential documents, and GPS devices today are found everywhere from personal mobile phones, to sophisticated vehicle, aviation and marine devices. Modern cell phones and GPS devices can store millions of records of data in the form of emails, messages, pictures, location data, and financial information, among thousands of others. With state-of-the-art forensic tools, our certified experts can recover data from cell phones and GPS devices, including data that has been deleted, and provide expert testimony.

## CELL SITE LOCATION ANALYSIS

---

Using records obtained from cellular service providers, our cellular analysis experts can determine the historic location of a person or object based upon cell phone activity. Our examiners handle dozens of phone record analysis investigations every year, and have testified in state and federal courts on numerous occasions. The proper interpretation of these records, both for location and meaning, is critical in every case.

## INFOTAINMENT AND VEHICLE SYSTEM FORENSICS

---

Using cutting edge technology, our experts are able to acquire data from vehicles beyond the contents of the EDR (Event Data Recorder) alone. Vehicle telematics and infotainment systems are rich with data, including navigation history, social media feeds, emails, text messages, Bluetooth connections, whether the vehicle's lights were on or off, which doors were opened, locked or unlocked, gear indicators, odometer readings and more.

## EXPERT WITNESS TESTIMONY

---

The extensive experience and industry certifications held by our experts allows them to creditably serve as expert witnesses. Many of our experts have provided expert testimony in state and federal courts across the country.

## OUR SERVICES

---

Envista's Digital Forensics team provides comprehensive solutions for examinations of evidence in matters including:

- Trucking/Vehicle Accidents
- Network Attacks
- Cyber Extortion (Ransomware)
- Civil Litigation
- Data Breach Incidents
- Criminal Litigation

For over 25 years, Envista Forensics has been at the forefront of servicing the insurance industry, legal professionals and corporations, successfully helping clients understand the cause of loss and determining responsibility following all types of equipment failures.

With extensive operations across North America, Latin America, EMEA and Asia-Pacific, Envista Forensics is uniquely positioned to deliver scientific expertise and court presentation experience to their clients, no matter where in the world these services are required.
