

Global Marine Vessel Claims

Envista provides marine engineering services for both the global ocean and inland based maritime industries. Our staff of career maritime experts consist of professional engineers committed to being your first and last call necessary for all vessel related matters. Our team is positioned to respond quickly and effectively, providing the quality our clients have come to expect from Envista Forensics.

HANDLING COMPLEX CLAIMS

We understand how quickly you need this information in order to effectively manage claim cost and client expectations, as well as the challenges you face to gain not only the right expert opinion in that shorter time frame, but also the appropriate path for failure or incident investigation.

If physical evidence and critical data has been missed, and the correct type of testing and technical analysis is not carried out, clients may be left exposed when determining policy coverage, claim quantum, and potential subrogation.

SERVICE OFFERINGS

- Cargo Securing Evaluation
- Corrosion and Coating Investigations
- Drydock, Graving Dock, and Ship Lift
- Hull & Machinery Damage
- Naval Architecture and Marine Engineering
- Vessel Marine Casualty or Accident Investigation
