

# Product Liability Investigations

Product liability investigations are complex and diverse, just like the products being investigated, and who better to investigate these unique matters than someone who has designed similar products, systems, or equipment.

## How Our People Make a Difference

At Envista, many of our experts have first-hand knowledge of how products are supposed to work, and are authorities when it comes to why they don't. Our team collectively has decades of experience designing and manufacturing consumer products, and industrial and commercial equipment.

Property damage, injury, loss of life, and other common claims can all lead back to a possible failure. Court presentation skills are important to have in experts because they not only need the knowledge and background to prove the why, but they need to be able to state it in a way others can understand. Our experts have this ability and have been doing it for nearly 30 years.

## How We Operate

Envista employs experts such as engineers, metallurgists, and chemists to effectively qualify and analyze errors and connections between product design, use, and error. What led to the event? What was the root cause? Our liability experts have a diverse background in engineering, forensic analysis, manufacturing, product development, and extensive knowledge of applicable regulations and standards such as OSHA, UL, ANSI, ASME, ASTM. This knowledge helps us perform a more comprehensive investigation and analysis of each product and component failure.

**Whether it's simple powered hand tools, smartphones, complicated industrial equipment, or building materials that incorporate new technologies, Envista's multidisciplinary team of engineers and experts has the experience you need for product liability investigations.**

## How We Stand Out

We have laboratory facilities all over the world to conduct in-depth product testing and analysis to ensure our clients the most accurate results, when it matters most. With the knowledge and expertise that comes from thousands of investigations, our clients get access to experts that can assist in a variety of different investigations, including:

- » Consumer Products
- » Construction Equipment
- » Exercise/Recreational Vehicles and Equipment
- » Industrial/Manufacturing Systems
- » Product Failures
- » Fire Investigation
- » Internet of Things (IoT)
- » Automobiles and Vehicle Components
- » Building Materials
- » Gas and Electric Appliances
